

Q.1 What are your ideas or suggestions to improve TDRA virtual camp?

Total responses 1

Total skipped 0

1. 1. Researching regarding current gaps which are faced by emirati students in different age groups. Comparing it to japanese education system model as it is the best (as per united nations). 3. Implementation of Switzerland , Japanese and Other best learning practices for developing the youth's potential. Developing positive mindset and gogetter attitude by early exposure to cognitive psychology , vocation and other survival training. 4. Having a mandatory overall personality ,health, self achievement assessment at age of 8, 10, 12, 14,16,18 etc for all students in school. This will help us to analyze a child's interests and hobbies, 4. Emphasizing on learning multidisciplinary knowledge about ALL subjects. 5. The idea for my future startup revolves around the same problem statement. As every child if gifted, we just need to find a way to develop those gifts. My research and skills development algorithm for having a proven solution structure is on going - in research, survey stage. I would like to have government's support to come up with a very unique educational system which would be a new standard for other countries to be inspired for universal growth. 6. Having proper loop of measuring development metrics & providing feedback indicators for developing skills, hobbies , knowledge, community etc for finding a child's key strengths and helping them to building their purpose, goals and dreams which also align with UAE vision.
